Education

George Mason University, Fairfax, Virginia, USA

Jan 2024 – Present

College of Engineering and Computing

Ph.D. in Electrical and Computer Engineering, Current GPA: 3.91

Advisor: Prof. Xuan Wang

- **Major Courses:** Linear Systems, Random Processes, Kalman Filtering, Distributed Control and Optimization, System Identification, Advanced Learning from Data

University of Southampton, Southampton, United Kingdom

Sept 2022 – Sept 2023

School of Electronics and Computer Science

M.Sc. in Computer Science, GPA: 3.8 (Top 3%)

- **Major Courses:** Advanced Machine Learning, Advanced Deep Learning, Computer Vision, Bayesian, Active & Reinforcement Learning

Xinjiang University, Xinjiang, China

Sept 2017 – Jun 2021

School of Software

B.Eng. in Software Engineering, GPA: 3.4 (Top 5%)

Publications

CONFERENCE PAPERS AND PREPRINTS

Elastic Spectral State Space Models for Train-Once Budgeted Inference

2026

Dachuan Song, Junyu Yin, Zechen Hu, Xuan Wang

Accepted to NeurIPS 2026 Main Track (Poster); proceedings forthcoming. arXiv:2601.22488.

Elastic Selective Spectral Hybrids for Train-Once, Export-Many Budgeted Inference

Sep 2026

Dachuan Song, Chuchu Chen, Xuan Wang

arXiv preprint, 2026.

Mergeable Model-Side Aggregation States for Long-Context Language Models

Jul 2026

Dachuan Song, Junyu Yin, Zechen Hu, Xuan Wang

arXiv preprint, arXiv:2607.26448, 2026.

Causality-based Subject and Task Fingerprints using fMRI Time-series Data

Nov 2024

Dachuan Song, Li Shen, Duy Duong-Tran, Xuan Wang

ACM BCB 2024, Article 13, pp. 1–10 (Oral Presentation). DOI: 10.1145/3698587.3701342.

JOURNAL ARTICLES

Reconstructing brain causal dynamics for subject and task fingerprints using fMRI time-series data

Oct 2025

Dachuan Song, Li Shen, Duy Duong-Tran, Xuan Wang

Health Information Science and Systems 13, Article 70 (2025). DOI: 10.1007/s13755-025-00388-w.

Research Projects

Elastic Selective Spectral Hybrids for Budgeted Inference

2026 – Present

- Built a selective spectral hybrid with input-dependent recurrent channels and sliding-window attention, so the model can retain relevant context while using a bounded recurrent state.
- Jointly trained spectral-channel and feed-forward capacity tiers for compact exports. At 1.53B parameters, fused batch-one decoding took 1.37 ms/token on a B300, 2.14–2.80× faster than the tested Mamba-2 and Mamba-3 implementations at matched parameter counts.

Elastic Spectral State Space Models for Train-Once Budgeted Inference

Jan 2026 – Present

- Built ES-SSM to export standalone compact models from one full-capacity checkpoint by truncating ordered Hankel spectral channels and their associated parameters.
- Combined input-adaptive channel gates with budget dropout so exported prefixes remain predictive across runtime budgets; evaluated the approach on language, audio, long-range, and offline reinforcement-learning tasks.

Mergeable Model-Side Aggregation States for Long-Context Language Models

Jul 2026 – Aug 2026

- Built SketchOps, a model-side interface that maintains compact, mergeable HyperLogLog sketch states alongside a frozen language model.
- Aggregated evidence across context segments with a fixed 2 KiB state; on 3,969 aggregate-then-reason tasks, the interface reached 99.2% accuracy on Gemma 4 (31B).

Machine Learning for Brain Activity Patterns using EEG (Master's Project)

Apr 2023 – Oct 2023

- Built a CNN-LSTM pipeline for spatial and temporal EEG features, with autoencoder pretraining and attention-based feature learning.
- Applied transfer learning to improve feature extraction from limited EEG data.

Internship Experience

Machine Learning Engineer Intern, Optosurgical

May 2026 – Aug 2026

- Developed video models for surgical phase and instrument-action recognition in robot-assisted procedures, providing workflow-state information for downstream systems.
- Compressed and fine-tuned Depth Anything 3 to 29% of its original size while retaining near-full model performance for monocular depth estimation.

Technical Skills

- **Sequence Models & Efficiency:** spectral and selective state space models, long-context modeling, budget-aware inference, model compression, attention, FFT-based convolution, CUDA.
- **Research Engineering:** PyTorch, multi-GPU training, debugging, ablation design, benchmark design, reproducible evaluation.
- **Modeling & Control:** linear dynamical systems, Kalman filtering/smoothing, system identification, LQR/MPC, VAR/autoregressive models.
